

Powerway® Document Control Document Manager

Powerway Document Manager provides secure document and data control, complete document revision history, and a distinct audit trail for each document.

- Preconfigured document types give Document Manager the ability to recognize the format of hundreds of electronic documents—letting you automatically launch the editing application. In addition, speciality document types can be managed.
- Electronic document routing lets you route documents for comment or approval before making them current.
- Traceability of electronic and paper distribution is a key component of the software.

Powerful and flexible, Powerway Document Manager automates many of the aspects of document control necessary to comply with your business standards, specifically Document Control requirements. It offers secure document and data control, complete document revision history, a distinct audit trail for each document, and integrates seamlessly with Powerway Desktop for convenient document access across the enterprise — all to help you reduce time to compliance.

Complete Revision Control

Offering the best implementation in the industry, Powerway Document Manager helps maintain *any* level of revision history. From keeping only current documents to maintaining every draft revision created, Powerway Document Manager lets you decide what's appropriate for each document.

Document Manager's check-in/check-out feature streamlines the editing process by allowing you to remove a copy of the document from its repository, edit the

document in its own application, and, after approval, return it to the repository as a new revision-while maintaining document control.

With complete control of each document's life cycle, you create an easy-to-follow audit trail directly within Powerway Document Manager, reducing the time and effort needed for compliance.

Powerway Suite 2000

Powerway Document Manager is one of the modules that make up Powerway Suite 2000. From design through production, Powerway Suite 2000 automates paper-intensive engineering, quality and manufacturing processes, helping you reduce costs, improve quality and speed time to market. Powerway software is designed to work together to provide complete paperless document

and data control, advanced quality planning, integrated quality management, and real-time factory floor data collection for optimum business process performance. Using Suite 2000, you can bring the entire organization together to overcome the problems caused by a lack of communication and collaboration such as late engineering changes, customer complaints, product quality issues, scrap and rework, and lost sales.
